HUFFPOST

A COMPARISON OF HYPEROFFICE ATLAS & SHAREPOINT

HyperOffice Inc.

With Atlas, what you see is what you get

Atlas has always been built as a singular, unified solution. Everything can be accessed from a single navigation and all components work as a unified whole.

Sharepoint is part of a myriad of Microsoft solutions sold under the umbrella of “Office 365” which includes its Office Suite, Teams, Yammer, Exchange, Outlook, One Drive, Business Intelligence, Dynamics etc. Navigating through its plans and functionality can be utterly perplexing.

Atlas, a unified “zen” experience

Sharepoint, the paralysis of too much choice

With Atlas, the user comes first

Atlas has been crafted with careful attention to delivering a beautiful and simple user experience. Anyone with basic understanding of web apps can get up and running the moment they log in.

Experts on Atlas...

HyperOffice offers its own value proposition: ease of use without compromising functionality.

Daniel Rasmus, Industry Analyst

Sharepoint is known for its focus towards IT departments in large enterprises. The result is a clunky and overly complicated user interface that leaves users feeling lost and frustrated.

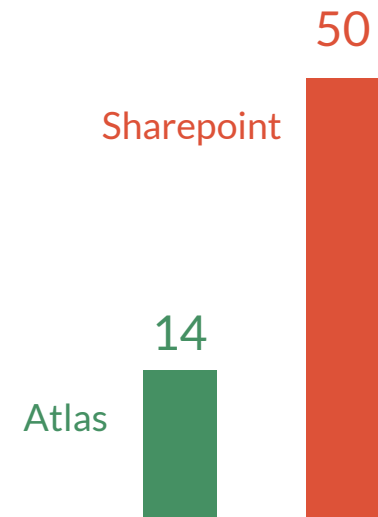

In Microsoft's own words...

The logical result of SharePoint Server's flexibility & richness can be a high degree of complexity around installing and configuring SharePoint Server correctly.

Microsoft Technet Library

The Click Comparison

The number of clicks needed to set up 5 users

Atlas is an end-to-end solution

Sharepoint is incredibly deep as a solution, but is complex and clunky. **Atlas** has the broadest feature-set of all the “Sharepoint alternatives” in the market which are presented in a simple interface. Atlas also offers some key capabilities that are missing even in Sharepoint

	Sharepoint	Atlas	Box
Document Management	■	■	■
Project Management	■	■	
Customizable Intranet Landing pages	■	■	
Shared Contacts & Calendars	■	■	
Online database and web forms	■	■	
Group chat and video conferencing		■	

Overall, I was deeply impressed by HyperOffice's depth of features, tight integration of all its elements, sleek appearance, and crack support team.

Edward Mendleson

The best thing about HyperOffice is that it combines all collaboration tools into one solution, helping to avoid the web app patchwork quilt problem

Amber Singleton

Atlas offers a wide selection of tools

Your Atlas toolkit consists of a broad range of collaboration sections which are super simple to use, without compromising on depth of functionality. It is comparable to Sharepoint in feature depth.

You don't need to be a rocket scientist to customize Atlas

Atlas can be tailored for your needs with drag and drop simplicity.

*With the **Intranet Publisher**, create tailored collaboration experiences for each team.*

Online relational databases & web forms let you create custom apps for your processes.

In Microsoft's own words...

Whether on-premises or hosted, deploying SharePoint Server requires the IT pro to be heavily involved.

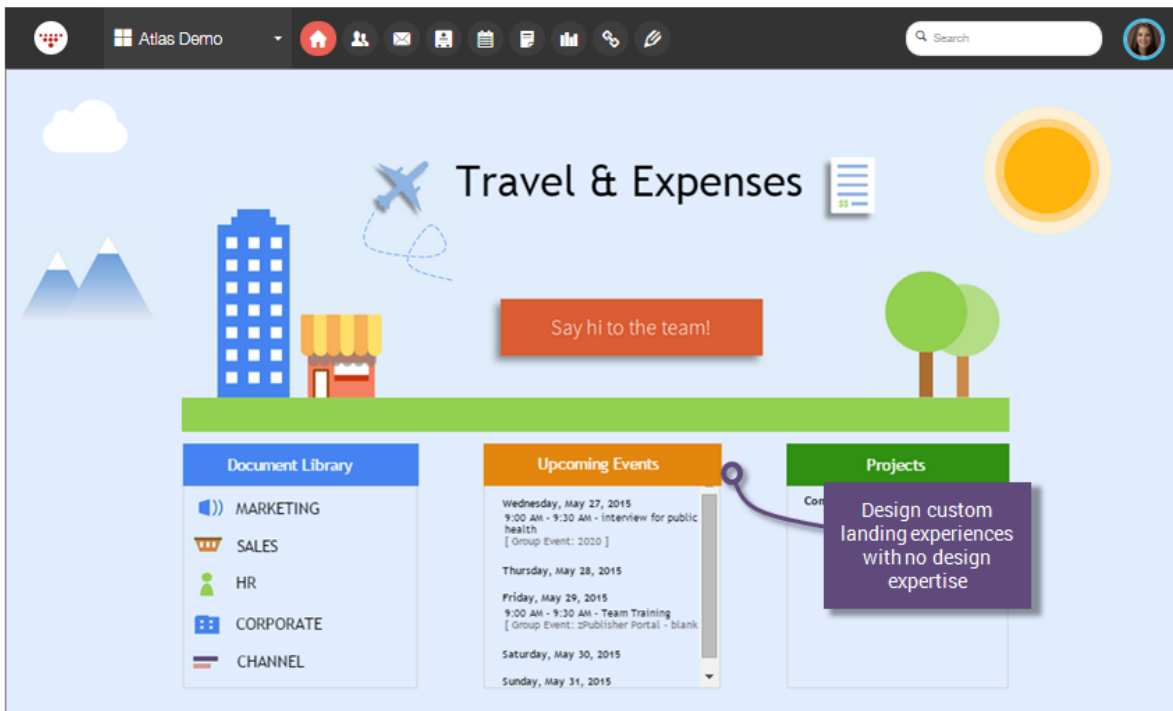

Microsoft Technet Library

Sharepoint is endlessly customizable.

However, you need to be a "Sharepoint expert" to configure and customize

Sharepoint. The fact that there are thousands of "Sharepoint certifications" confirms this.

Built with Atlas

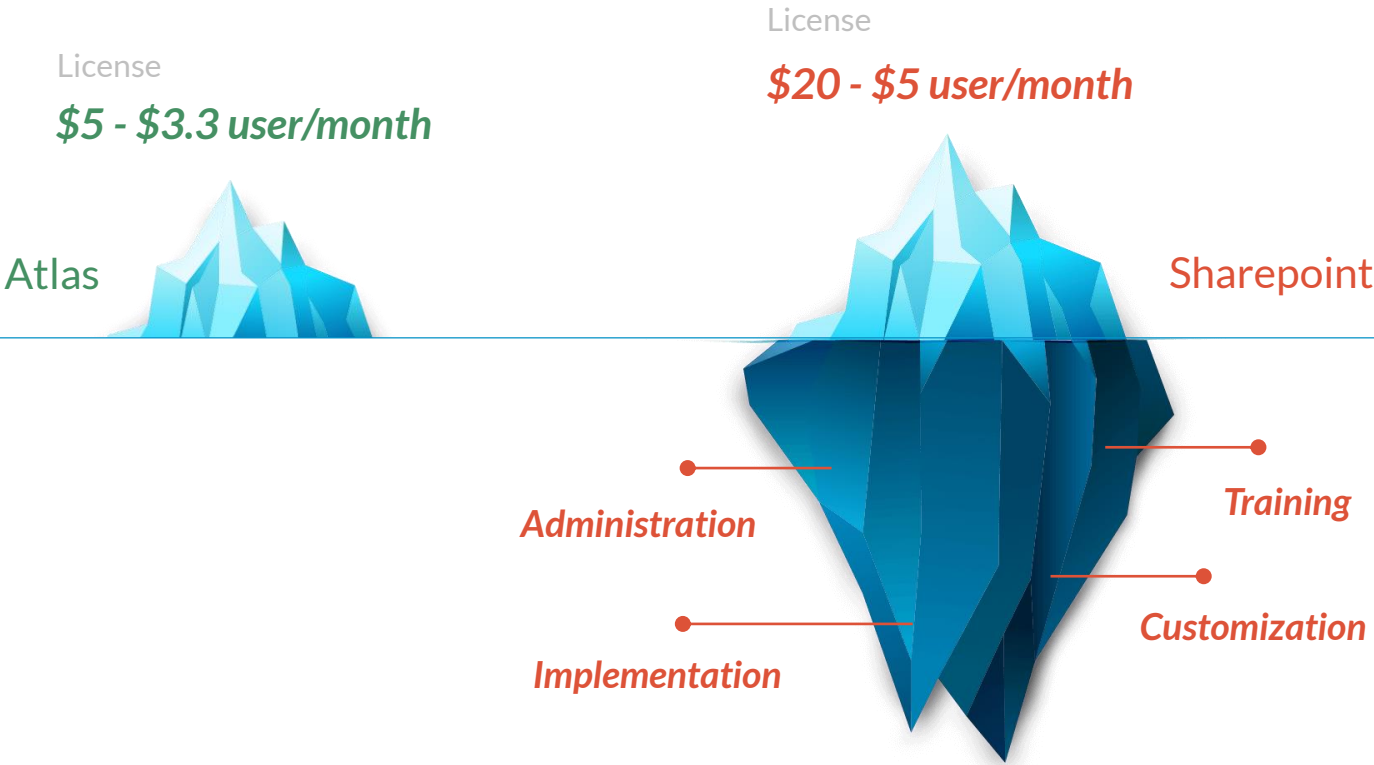

Atlas gives you more bang for the buck

With a simple and transparent pricing plan ranging from \$5 to \$3.33 per month, **Atlas** is a cost leader in the collaboration market.

Whether you deploy **Sharepoint** server or choose Sharepoint online, you have to reckon with considerable “hidden” costs of deployment, customization and maintenance.

Our estimate is that the typical organization still requires 65% of the staffing it needed for on-premises server management when it moves to Microsoft Office 365 Enterprise E3.

Gartner

Atlas is cloud native

Since its inception in 2004, HyperOffice is a pioneer in deploying massively scalable cloud native solutions.

This deep experience is fully assimilated in Atlas which was built ground up as a cloud solution and delivers an elegant experience with high availability and stability.

After much resistance, the market has compelled Microsoft to fully commit to the cloud.

Office 365 was first launched in mid 2011, and was initially an online replica of its legacy server solutions – Microsoft Exchange and Sharepoint. This legacy continues to find an imprint in the cloud version of Sharepoint
