

# uShare.to Datasheet

uShare.to is a next generation workplace technology empowering users to conference, chat and share information from any collaboration system in instant private workspaces.

# Meet, share, communicate on-the-move

uShare.to is a ubiquitous collaboration platform which allows people to with their broader network of customers, partners and remote teams, while leveraging information in their

## Bridging the information divide

### Breaking Application Silos

While today's collaboration systems offer rich functionality within the organization, there is no easy way to share information with clients, partners and vendors on other systems. The only available option is email.

**uShare.to solves this problem.** uShare.to allows users from different organizations to leverage existing systems and pull information into a single, simple, and social environment for sharing *and* data bi-directional synchronization.

### Content and Conversations

A teamwork environment complementary to countless existing systems, uShare.to brings each user's information to a collaborative workspace.

uShare.to pairs synchronized data with video conferencing, messaging, and team workspaces. It offers a consistently rich experience for collaborations among a few colleagues, to collaborations with customers, partners and vendors across company boundaries.

### Mobile First

With powerful iOS and Android apps, uShare.to is ideal for modern businesses which want in on the mobility revolution. uShare.to lets them empower their mobile workers with best in class apps to increase teamwork and productivity.

### Solving BYOA – Breaking Barriers within the Organization

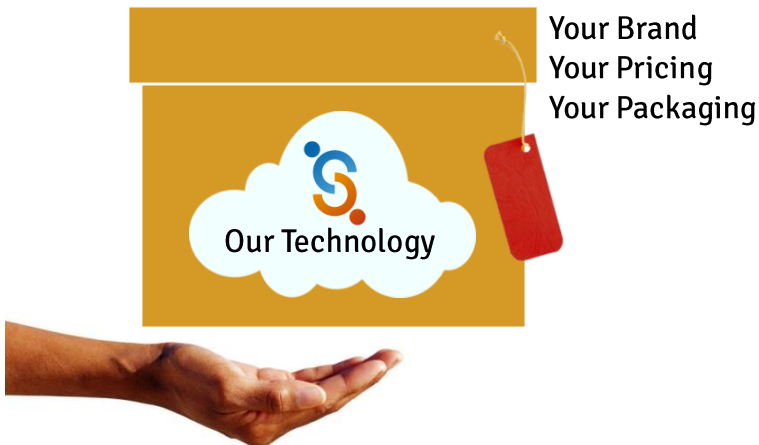

Application silos may also exist within the same organization - different groups on different systems, or users who bring their own applications into the company (BYOA). uShare.to offers a simple platform where different groups within the organization can easily share information with each other, even if they are on different systems.

### Get more from your Collaboration Platform

uShare.to complements existing collaboration applications, rather than replacing them. It effectively allows companies to avoid repeatedly falling back upon email.

# Geared for Service Providers

Allows service providers to complement their existing application portfolio and bring additional value

## Offer a Unique Service in Collaboration

Collaboration software is one of the fastest growing markets in IT (top 3 market in 2012 per IDC) with near universal adoption. Share.to allows Service Providers to offer a unique solution in the market that complements the systems its customers already have, while solving a pertinent pain point.

## Private Labeling

Private Labeling leverages our best-of-breed technology while enabling service providers to launch products under their own brand.

## Flexible Deployment

We offer flexible hosting plans where the solution may be deployed from HyperOffice's data centers or data centers of the service providers' choice.

## Localization

Our technology is already available in English, Spanish and Japanese, and our resource bundling approach allows us to quickly localize to other languages per service provider requirements.

## Rich APIs

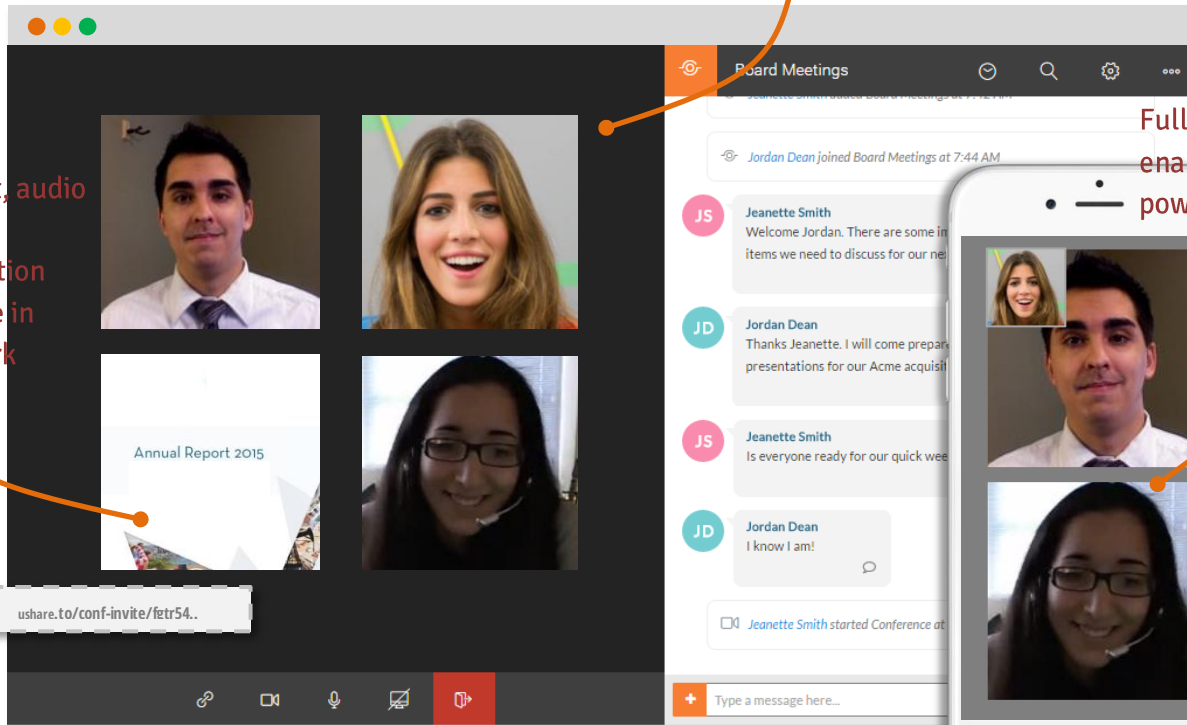

Our extensive APIs allow service providers to integrate our collaboration solution with existing services and offer bundled products to their users. We offer out-of-the-box integration with VOIP and video/web conferencing technologies.

# Features and Functionality

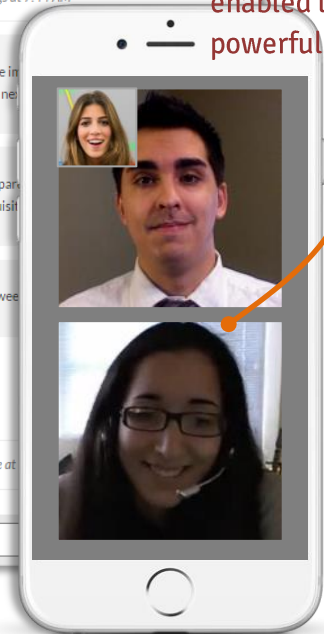

Make information from existing systems instantly sharable.

Instant chat, audio and video communication with anyone in your network

Fully mobile enabled through powerful apps

## The Mechanics

Within uShare.to, users may create new information, or **connect information from third-party systems** like Google Apps, Office 365, Exchange, SharePoint and many others.

Information is always private to a user, and the user is in

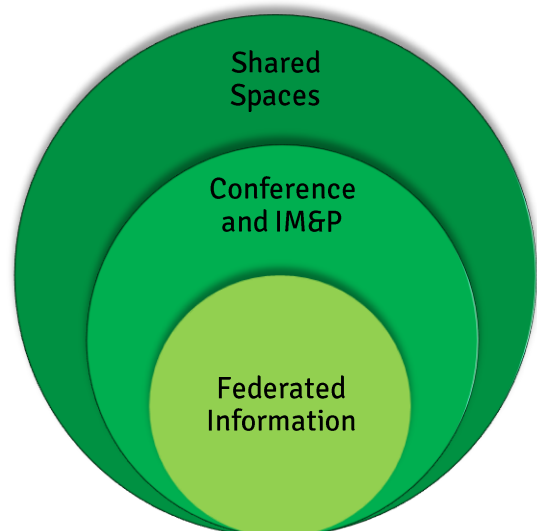

information can be dragged into a "Share".

A "Share" is a shared repository of information where other people may be granted access by just adding their email address.

## True Collaboration Stack

While the core of uShare.to lies in its federation technology, collaborators experience it within the context of social conversation and conferencing while *framed* within a shared working environment.

This structure gives users access to their data at their fingertips while continuing their conversations in all of their collaborative "shares." Federated data from all of a user's third-party sources feeds directly into the messaging, conferencing, and team workspace environment collaborators needs.

## Shares

- ✓ Access Permissions
- ✓ Create new information within the Share
- ✓ Image Brand Shares
